

p. 337 #3a) Solve graphically.

$$\textcircled{1} \quad 3x + y - 1 = 0$$

$$\textcircled{2} \quad 2x = y - 6$$

$\textcircled{S1}$ let calculate intercepts.

$$\textcircled{1} \quad x = 0$$

$$3(0) + y - 1 = 0$$

$$y - 1 = 0$$

$$y = 0 + 1 = 1$$

y-int. $(0, 1)$

$$y = 0$$
$$3x + (0) - 1 = 0$$

$$3x - 1 = 0$$

$$3x = 1$$

$$x = \frac{1}{3}$$

$(\frac{1}{3}, 0)$

$$\textcircled{2} \quad x = 0$$

$$2(0) = y - 6$$

$$0 = y - 6$$

$$6 = y$$

$y = 6$ $(0, 6)$

$$y = 0$$

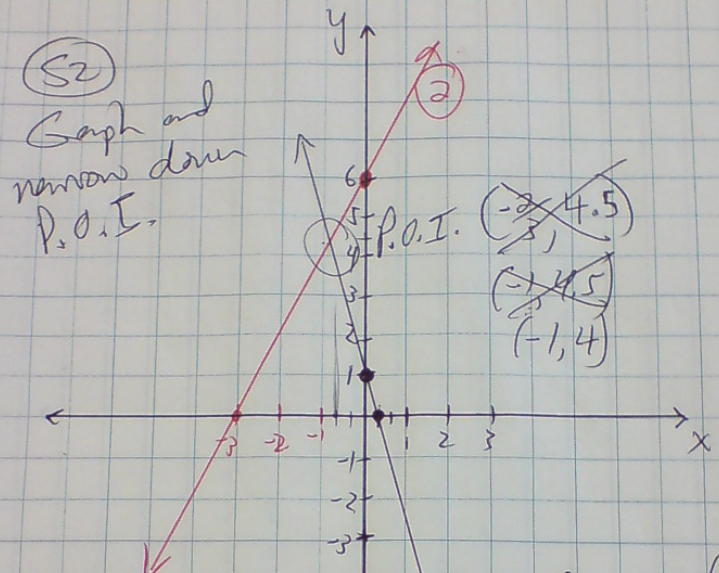

$$2x = (0) - 6$$

$$2x = -6$$

$$x = \frac{-6}{2} = -3$$

$(-3, 0)$

(S2) Graph and narrow down P.O.I.

(S3) Check POI with both equations -

①

$$LS = 3\left(-\frac{2}{3}\right) + (4.5) - 1 \quad RS = 0$$

$$LS = -2 + 4.5 - 1$$

$$LS = 2.5 - 1$$

$$LS = 1.5$$

$LS \neq RS$
 $\therefore \left(-\frac{2}{3}, 4.5\right)$ is not true.

② Then re-try P.O.I.

①

$$LS = 3(-1) + 4 - 1 \quad RS = 0$$

$$= -3 + 4 - 1$$

$$= 1 - 1$$

$$LS = 0$$

$LS = RS$

②

$$LS = 2x \quad RS = 4 - 6$$

$$= 2(-1) \quad = -2$$

$$= -2 \quad LS = RS$$

\therefore P.O.I. $(-1, 4)$.
